EXPERIENCE

AfterQuery | Software Engineer

June 2026 – Present

- ~

Human Delta | Software Engineer

Oct 2025 – May 2026

- I was the 2nd hire at Human Delta, a startup focused on connecting fragmented enterprise contexts for enterprise AI agents.
- Built agent workspace with tool-calling, chart visualizations, context compression; persisted history in Postgres via Prisma and Supabase.
- Architected multi-source audit pipeline ingestion; parallelized page analysis across workers with hash caching; built conflict detection.
- Built VFS, mounting live knowledge base crawls into shell-accessible tree; enabling agent-run bash commands against crawled content.
- Shipped developer platform REST API (/v1/documents, /v1/indexes, /v1/search, v1/fs) with API-key auth, hashed key storage, RLS policies, and cosine similarity retrieval; enabling third-party agents and MCP-compatible clients to query org knowledge corpus.

Zams | Software Engineer Intern

Aug 2025 – Oct 2025

- Built dashboard tracking customer queries and agent actions in Next.js/TypeScript + SQL, providing audit trails and usage analytics.
- Developed unit, integration, and E2E tests for tool-calling pipelines, enabling regression detection and monitoring for LLM tool integrations.
- Partnered with design teams to ship 5+ full-stack features, deploying builds onto Vercel with 98% uptime and GCP with 99.9% uptime.

Letta | Software Engineer Intern

Jun 2025 – Aug 2025

- Shipped 90+ merged PRs in TypeScript, Next.js, and Python– delivering redesigned Tool Rules, Agent Loops (for agent flow visualizations), and Observability routes, to Letta Cloud & Desktop, alongside UI/UX improvements (message loading, file systems, context windows, etc).
- Built a multimodal (voice · text · video) assistive screen-streaming app with agent orchestration, MCP tools, and tool rule constraints.
- Extended provider endpoint validation and MCP server access across Zapier, Github, Stripe, Hugging Face, Exa, DeepWiki, Pipedream, etc.
- Developed Metta, an AI agent that leverages Letta's SDK to build other AI agents equipped with memory blocks, and core + MCP tools.

Mercor | AI & Coding Analyst

Jan 2025 – Apr 2025

- Coding and reasoning datasets on RLHF pipelines for leading AI research labs.

AT&T | Software Engineer Intern

Jun 2024 – Aug 2024

- Researched and integrated speech models (OpenAI, MyShell) to build multilingual ASR, transcription, and translation pipelines; enabled customer support teams to converse with global users beyond their native languages (US English → Spanish, French, Japanese, Chinese).
- Redesigned STT workflows– enabling service control, cost savings (>\$50k), reduced latency, and enhanced versatility of voice services.
- Built RESTful APIs for multilingual speech services via Python, FastAPI, Docker, and Kubernetes; leveraged AKS and GPU acceleration.
- Achieved 1st place out of 19 teams during AT&T TDP Innovation Challenge; presented MVP multilingual speech to CTO & executives.

CSUF Research | Artificial Intelligence Research Intern

May 2023 – Jul 2023

- Researched symbolic regression models and applied genetic selection, crossover, mutations via PyTorch, to evolve equations to 3D shapes.

SKILLS

Languages: Python, TypeScript/JavaScript, C++, SQL, Bash (Familiar: Java, R, C#)

AI/ML: LLMs, RAG, embeddings, filesystems, multi-agent systems, tool use, LoRA fine-tuning, PyTorch, vLLM

Systems/Infra: Distributed Systems, FastAPI, Node.js, Docker, Kubernetes, Terraform, GCP/AWS, CI/CD, PostgreSQL, Redis

Frontend/Tools: Next.js, React, React Native, TanStack, PostHog, Linear, Vercel, Render, Bun, Cursor, Letta, Figma, Drizzle, Infisical

EDUCATION

California State University, Fullerton

B.S. in Computer Science, Economics

Aug 2022 – May 2026

Fullerton, CA

ADDITIONAL

- **ASI Board of Directors:** Advocated for 3,000+ ECS students, securing funding, organizing events, and shaping key campus policy.
- **ACM E-Board:** Advanced 20+ developmental workshops events for 200+ students, and created ACM Node Buds (leadership pipelines).
- **FullyHacks Director:** Supported teams in marketing, finance, design, and web dev, to organize CSUF's hackathon for 400+ students, twice.
- **Meta x MLH:** Fellowship in production engineering, learning about system reliability, capacity planning, and infrastructure management.
- **Google Student Engineer:** Built websites alongside 9 Google engineers. Moderated 650-members, automated roles, logs securities, etc.
- **Dreams for School Instructor:** Taught basic software engineering and block-based programming to 60+ students over 2 semesters.
